

The Biggest Cover-Hammer Assortment in the World

In 1935 THOR produced their first rawhide hammer. Today this hammer still belongs to the biggest cover-hammers in the world.

The body of the THOR hammers are available in copper, brass, aluminium, lead, rawhide, rubber, nylon and several different plastics. Thanks to this big choice and the many different weight classes, shapes of the header and hammer constructions we provide a suitable THOR hammer for any working field.

An advantage of a cover-mallet is the reduced risk that a work piece is damaged. Furthermore the body of the cover-hammer adapts itself to the work piece due to its elasticity, by what:

- the punch is evenly spread across the body of the hammer;
- the risk of fragmentation of the header as well as the work piece is being reduced
- the punch is abated, consequently the risk of injury is being reduced, less inefficient rebound and lower noise emission while working.

Therefore hammers of THOR are a safe alternative to the traditional steel hammers in many fields of application.

Also ergonomically aspects are very important for THOR. THOR produces mallets with splitheads for easy use and short working-interruptions

The fibreglass handles, which are deliverable if requested, guarantee a high lifetime and are highly acid- and chemical-resistant. Those examples characterise the variety of the THOR programme as well as the perfect finish of the products and their quality.
